### Emerson Climate Technologies Mobile Toolbox

WRMobile™ provides instant access to product replacement information including wiring diagrams, sell sheets, installation and operating instructions for thermostats, gas valves and HVAC controls. Scan and download the App here.

## White-Rodgers Technical Support

**800-284-2925**

## White-Rodgers Customer Service

**888-725-9797**

The White-Rodgers replacement information is provided without charge as a complimentary service and is therefore given on the express understanding and agreement of the recipient that it is given without warranty (express or implied) or liability of any kind. It is the responsibility of the installer to verify that a White-Rodgers replacement is suitable for installation. This may require referring to product installation instructions, contacting the original equipment manufacturer, contacting a qualified service person or other steps. Final responsibility for the selection and application of a control rests solely with the installer.

# ► Gas Valve Selection Guide

What questions need to be asked when matching up gas valves?

## 1. Type of Valve

- 1.1 Standing Pilot
- 1.2 Intermittent Ignition (Proven/Intermittent Pilot)
- 1.3 Direct Burner Ignition (Spark or Hot Surface)
- 1.4 Single Stage
- 1.5 Two-Stage

## 2. Pipe Size Both Inlet and Outlet

## 3. Coil Voltage

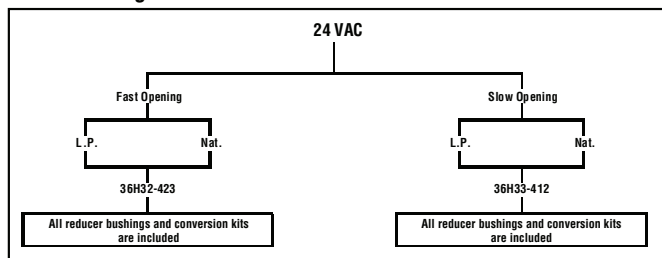

- 3.1 24V
- 3.2 750 mV
- 3.3 Line Voltage (120 or 240V)

## 4. Type of gas (LP or Natural)

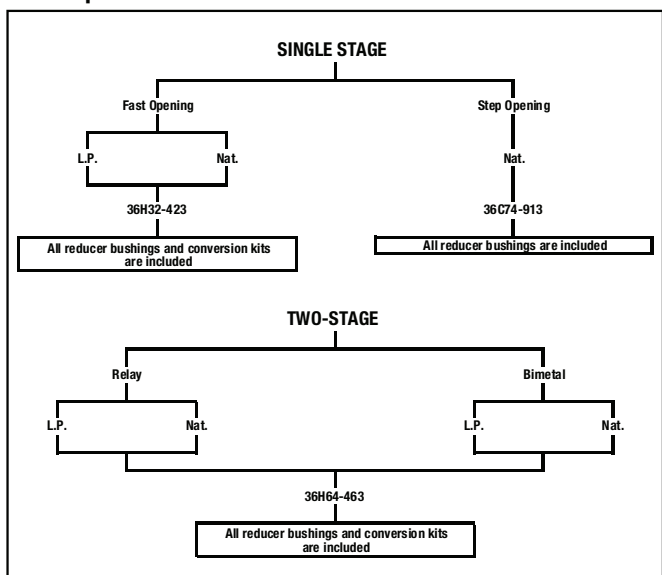

## 5. Opening Characteristics of Gas Valve

- 5.1 Fast Opening
- 5.2 Slow Opening
- 5.3 Step Opening

### Hot Surface Ignition

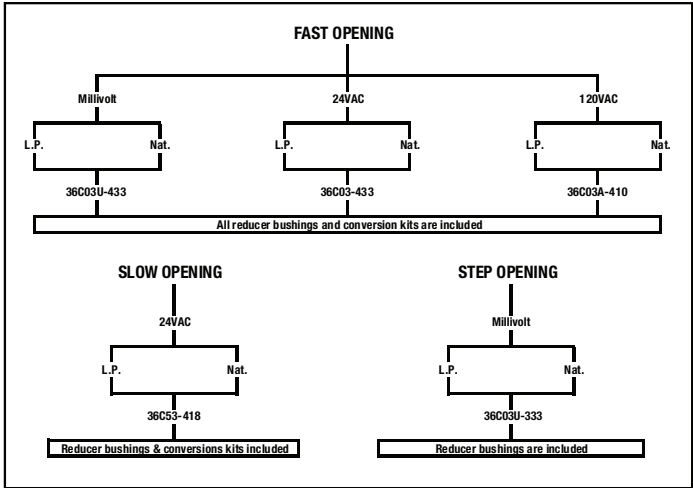

### Direct Spark

# ► System Applications

## Hot Surface Ignition (HSI)

The thermostat calls for heat and energizes the HSI control. If system is equipped with prepurge, the purge fan is energized and power will be delayed thirty seconds before application to the Hot Surface Ignitor. If prepurge is not selected, the ignitor is powered within one second. The ignitor heats up and at the end of the heating period, the redundant and main valves are opened. A flame must be detected within a fixed time period or both valves close, the ignitor is turned off and the HSI control locks out unless the system is equipped with retry. Retry indicates the ignition sequence will be repeated for a total of three tries if flame is undetected or lost within 30 seconds of ignition.

Typical Wiring for Hot Surface Ignition System

## Direct Spark Ignition (DSI)

The thermostat calls for heat and simultaneously energizes the DSI control module and gas valve solenoid. Sparks at the ignition electrodes ignite the gas at the main burner. Flame is sensed through the electrodes by the flame detection circuit and shuts off the sparking. If flame is not established within a fixed time period (lock-out time) main and redundant valves close, sparking ceases and the control module locks out.

Typical Wiring for Direct Spark Ignition System

## Standing Pilot

Gas flow to the pilot burner is controlled by a safety valve which is manually operated and held in by current generated from a thermocouple placed in the pilot flame. When the thermostat calls for heat the main valve is energized.

**Wiring for 36C03 (24 VAC) with E.C.O.**

## Proven Pilot

The thermostat calls for heat and simultaneously energizes the pilot valve and the Proven Pilot control. Sparking from the ignition electrode to the pilot burner ignites the gas at the pilot burner. Flame is sensed by the flame detection circuit which energizes the main valve. Main burner gas is ignited and sparking ceases once a pilot flame is detected.

**Typical Wiring for Proven/Intermittent Pilot System**

# ► System Applications

## Cycle Pilot System

The thermostat calls for heat and simultaneously energizes pilot solenoid and pilot relight control. Pilot valve opens and relight begins sparking. Gas flow activates the pressure switch. Sparks ignite pilot gas. Once the flame is detected, the sparks stop. After sufficient heat is sensed by the Mercury Flame Sensor, the main valve is energized and the system is in operating mode. (Fig. 1)

The schematic for "ALL GASES," Figure 2, includes a safety timer which acts to close the main gas valve, turns off the pilot redundant coil and locks out the system should a flame not be detected within a fixed period of time.

# ► Product Features and Specifications

## 36C Series

Combination Gas Valve. The versatile 36C03 Series combination gas valves cover a wide range of applications. Designed for use with common ignition systems and standing pilots, it replaces hundreds of existing models in the field.

### Features

- Standing Pilot
- Single Stage
- Fast Opening
- Max. Capacity @  
1" PD = 280,000 BTU/HR
- Convertible – natural or LP gas
- Adjustable regulator(s)
- Inlet/outlet screens
- Line interrupter
- Inlet/outlet pressure taps
- CSA approved
- Optional sidetaps

### Specifications

Electrical Rating.....	0.23 Amps @ 24 VAC
Other Voltage.....	750 mV, 120 VAC
Operating Ambient Temperature.....	-40° to 175°F (-40° to 79°C)
Pressure Rating (max.).....	1/2 PSI (14.0" W.C.)
Pilot Gas Connection.....	1/4" compression fitting
Pressure Tap .....	1/8" N.P.T.

## 36H Series

Universal Replacement Electronic Ignition Gas Valve. The versatile 36H Series combination gas valves cover a wide range of applications. Designed for use with common ignition systems (HSI/DSI/Proven Pilot), it replaces hundreds of existing models in the field. The 36H Series is our highest capacity combination gas valve.

### Features

- HSI/DSI/Proven Pilot
- Single Stage/Two-Stage
- Fast/Slow Opening
- Convertible – natural or LP Gas
- Adjustable regulator(s)
- Inlet/outlet screens
- Electric on-off switch
- Inlet/outlet pressure taps
- CSA approved

### Specifications
